## Cabernet Sauvignon 2018

MAIPO VALLEY

### 2018 VINTAGE

The 2017-2018 season started with a very hot, bright and dry summer 2017. Spring 2017 was calm with some rainfall, good temperature and light conditions, without significant incidents of frost. Later in the spring and approaching the summer, the influence of the girl phenomenon grew, which implies a cooling of the Pacific Ocean, resulting in somewhat lower temperatures than normal during December and the first days of January.

### HISTORY

Our Cordillera range is about finding the finest expression of a variety in a specific valley. For our Cordillera Cabernet Sauvignon, we chose Maipo Valley, specifically the mountainous area of Pirque, known throughout Chile for the quality of its red wines. The region's particular soil and climate conditions make for very elegant, character-driven wines, which is exactly what we seek in our Cordilleras.

### VINEYARDS

#### COLUVIÓN VINEYARD

Location:	Pirque sector, Valle del Maipo Andes.
Coordinates:	33°42'39" S 70°36'23" O
Elevation:	780 meters above sea level
Distance from the Andes Mountains:	0 kilometers
Surface area:	6 ha
Planting year:	1992
Planting density:	2,1 m. x 1,2 m., equal to 3.950 plants per hectare.
Training system:	Double cordon with North West-South orientation
East	
Production:	1.5 to 2 kilos per plant

**Soil:** The vineyard grows in colluvial soils over clay loam alluvial soils, which in turn rest on a section of sandy loam, with some jagged stones on the surface and rounded pebbles deeper down. The soil is moderately alkaline and not very fertile, because it contains little organic matter.

**Climate Conditions:** The climate is semi-arid and strongly influenced by the proximity of the Andes Mountains, but also by the South Pacific anticyclone, which ascends the open valley and results in very cold nights during the growing season. Due to the location of the vineyards and the topography, the difference between daytime and night-time temperatures can be more than 20°C.
